

OMX 333DC

The OMX 333 model series are simple DIN rail mountable programmable transmitters.

Type OMX 333DC is designed for measurements of higher DC and AC voltage and current, easily adjustable in the instrument's menu.

The instrument is based on a single-chip microcontroller with a 16-bit A/D and D/A converter, which provides good accuracy, stability and ease of use.

PROGRAMMABLE ISOLATED TRANSMITTER

- Range: $\pm 0,5/\pm 1/\pm 5$ A
 $\pm 25/\pm 50/\pm 100/\pm 200/\pm 400$ V
- Digital filters, Tare, Linearization
- Output: 0/4...20 mA/0...5 mA/0...2/5/10 V/ ± 10 V
- Galvanic separation: 2,5 kVAC
- Power supply 10...30 VDC/24 VAC
- Option
Comparators - Data output

OPERATION

Instrument can be controlled by two push buttons and a DIP switch located on the front panel. When frequent changes of settings are needed, we recommend the use of OM Link interface, which in conjunction with free control SW allows for modification and storage of all instrument's settings and also for firmware upload (using OM Link cable) from a PC.

The above mentioned SW can also be used for visualisation and archiving of measured values from a number of instruments via the RS 485 line.

All settings are stored in the EEPROM memory (they hold even after the instrument is switched off).

OPTION

COMPARATORS are assigned to monitor two limit values with relay output. The limits have adjustable hysteresis within the full range of the display as well as selectable delay of the switch-on in the range of 0...99,9 s. Reaching the preset limits is signalled by LED and simultaneously by the switch-on of the relevant relay.

DATA OUTPUTS are for their rate and accuracy suitable for transmission of the measured data for further projection or directly into the control systems. We offer an isolated RS485 with ASCII protocol.
