

OMX 312UNI

Digital DIN rail mounted signal conditioner

MULTIFUNCTION INPUT (DC, PM, RTD, T/C, DU)

- Multifunction input (DC, PM, RTD, T/C, DU)
- Configurable type and measuring range
- 2x Analog output, passive/active
- Quick configuration by DIP switch
- PC configurable via USB port
- Galvanic isolation 2.5 kVAC
- Simple instalation to DIN rail

Legend

- ① Connectors
- ② RGB Status LED
- ③ Control button
- ④ microUSB port for PC connection

LED indication

PWR	SET	STATUS
Green solid		Device is running
Red solid		Device error - processor
Green solid	Open circle	Tare function is activated
Green solid	Red solid	Sensor error
Green solid	Yellow solid	Simulation mode is activated

DANGER

HAZARD OF ELECTRICAL SHOCK

- Disconnect all power and other supply lines before servicing equipment

Failure to follow this instruction may result in death or serious injury.

WARNING

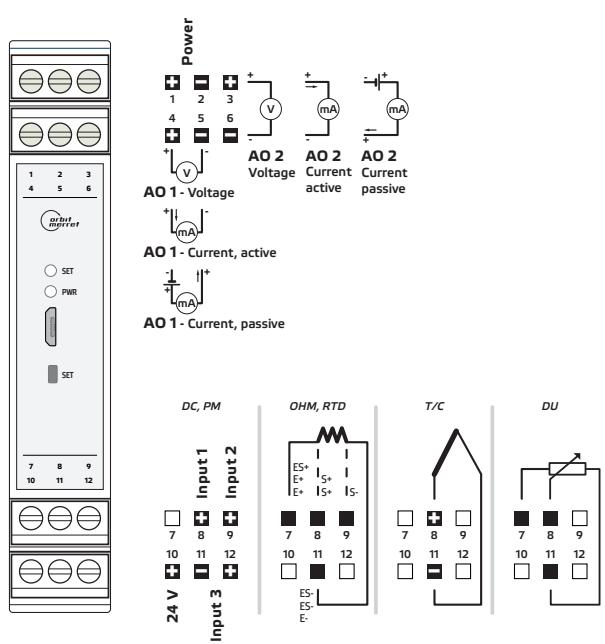

EQUIPMENT OPERATION HAZARD

- Do not use this product in safety critical system
- Do not disassemble, repair or modify this product
- Do not operate beyond the recommended operating environment

Failure to follow these instructions may result in death, serious injury, or equipment damage.

Note

Contactors, high power electric motors, frequency drives and other power devices should not be in a close proximity of the meter. Input signal leads (measured value) should be separated from all power lines and power devices. Even though the device has been designed and tested according to standards for industrial environment, we strongly advise to adhere to the above presented rules.

Analog input range setting, Teach-in

- Enter the teach-IN mode by a long press (>2 s) of the **SET** button - LED **PWR** yellow and LED **SET** turquoise (DIP 1-5 to OFF)
- Put the connected sensor in the position that shall have minimum output **RNG.MIN** (for example 4.02 mA)
- Set the minimum output value by a long press (>2 s) of the **SET** button - LED **PWR** yellow, LED **SET** purple
- Put the connected sensor in the position that shall have maximum output **RNG.MAX**. (for example 19.97 mA)
- Set the maximum output value by a long press (>2 s) of the **SET** button - LED **PWR** yellow, LED **SET** green
- Leave teach-IN mode by a short press of the **SET** button and return to the standard working mode - LED **PWR** green

The teached measuring range is non volatile and retained even after power off/on

Setting of **Analog input, Teach-in** is active only when DIP switches No. 1-5 are in the "OFF" position, i.e. **Setting via OM Link**

Zero settings (Tare)

- Enter the tare mode by a short press of the **SET** button - LED **PWR** white and LED **SET** turquoise
- Put the connected sensor in the position where the tare function shall be executed
- Set the tare by a long press (>2s) of the **SET** button - LED **PWR** white, LED **SET** green
- Leave tare mode by a short press of the **SET** button - LED **PWR** green, LED **SET** white

The tare is always reset automatically when the device is switched off.

A short press at any time during the calibration will end the calibration without saving. After one minute of inactivity, the calibration is terminated without saving and both LEDs return to the basic state.
