SAFETY INSTRUCTIONS

Please, read the enclosed safety instructions carefully and observe them!
These instruments should be safeguarded by isolated or common fuses (breakers)!
For safety information the EN 61 010-1 + A2 standard must be observed.
This instrument is not explosion-safe!

TECHNICAL DATA

Measuring instruments of the OM 402 series conform to the European regulation 89/336/EWG.

The instruments are up to the following European standards:
EN 55 022, class B
EN 61000-4-2, -4, -5, -6, -8, -9, -10, -11

Seismic capacity:
IEC 980: 1993, čl. 6

The instruments are applicable for unlimited use in agricultural and industrial areas.

CONNECTION

Supply of energy from the main line has to be isolated from the measuring leads.

2.1 DESCRIPTION

The OM 402 model series are 4 digit panel programmable instruments designed for maximum efficiency and user comfort while maintaining their favourable price. Two models are available: UNI and PWR.

Type OM 402UNI is a multifunction instrument with the option of configuration for 8 various input options, easily configurable in the instrument menu. By further options of input modules it is feasible to measure larger ranges of DC voltage and current or increase the number of inputs up to 4 (applies for PM).

The instrument is based on an 8-bit microcontroller with a multichannel 24-bit sigma-delta converter, which secures high accuracy, stability and easy operation of the instrument.

TYPES AND RANGES

UNI	DC:	0...60/150/300/1200 mV
	PM:	0...5 mA/0...20 mA/4...20 mA/±2 V/±5 V/±10 V/±40 V
	OHM:	0...100 Ω/0...1 kΩ/0...10 kΩ/0...100 kΩ/Autorange
	RTD-Pt:	Pt 50/100/Pt 500/Pt 1000
	RTD-Cu:	Cu 50/Cu 100
	RTD-Ni:	Ni 1 000/Ni 10 000
	T/C:	J/K/T/E/B/S/R/N/L
	DU:	Linear potentiometer (min. 500 Ω)
UNI - A	DC:	±0,1 A/±0,25 A/±0,5 A/±2 A/±5 A/±100 V/±250 V/±500 V
UNI - B	PM:	3x 0...5 mA/0...20 mA/4...20 mA/±2 V/±5 V/±10 V/±40 V

PROGRAMMABLE PROJECTION

Selection:	of type of input and measuring range
Measuring range:	adjustable as fixed or with automatic change
Setting:	manual, optional projection on the display may be set in the menu for both limit values of the input signal, e.g. input 0...20 mA > 0...850,0
Projection:	-9999...9999 (-99999...999999)

COMPENSATION

of conduct:	in the menu it is possible to perform compensation for 2-wire connection
of conduct in probe:	internal connection (conduct resistance in measuring head)
of CJC (T/C):	manual or automatic, in the menu it is possible to perform selection of the type of thermocouple and compensation of cold junctions, which is adjustable or automatic(temperature at the brackets)

LINEARIZATION

Linearization:*	by linear interpolation in 50 points (solely via OM Link)

DIGITAL FILTERS

Floating average:	from 2...30 measurements
Exponen.average:	from 2...100 measurements
Rounding:	setting the projection step for display

MATHEMATIC FUCTIONS

Min/max. value:	registration of min./max. value reached during measurement
Tare:	designed to reset display upon non-zero input signal
Peak value:	the display shows only max. or min. value
Mat. operations:	polynome, 1/x, logarithm, exponential, power, root, sin x

* only for types DC, PM, DU

EXTERNAL CONTROL

Lock:	control keys blocking
Hold:	display/instrument blocking
Tare:	tare activation/resetting tare to zero
Resetting MM:	resetting min/max value
Memory:	data storage into instrument memory

2.2 OPERATION

The instrument is set and controlled by five control keys located on the front panel. All programmable settings of the instrument are performed in three adjusting modes:

LIGHT **Simple programming menu**
- contains solely items necessary for instrument setting and is protected by optional number code

PROFI **Complete programming menu**
- contains complete instrument menu and is protected by optional number code

USER **User programming menu**
- may contain arbitrary items selected from the programming menu (LIGHT/PROFI), which determine the right (see or change)
- acces without password

All programmable parameters are stored in the EEPROM memory (they hold even after the instrument is switched off).

OMLINK Complete instrument operation and setting may be performed via OM Link communication interface, which is a standard equipment of all instruments.

The operation program is freely accessible (www.orbit.merret.cz) and the only requirement is the purchase of OML cable to connect the instrument to PC. It is manufactured in version RS 232 and USB and is compatible with all ORBIT MERRET instruments. Another option for connection is with the aid of data output RS 232 or RS 485 (without the need of the OML cable).

The program OM LINK in „Basic" version will enable you to connect one instrument with the option of visualization and archiving in PC. The OM Link „Standard" version has no limitation of the number of instruments connected.

2.3 OPTIONS

Excitation is suitable for supplying power to sensors and transmitters. It has a galvanic separation.

Comparators are assigned to monitor one, two, three or four limit values with relay output. The user may select limits regime: LIMIT/DOSING/FROM-TO. The limits have adjustable hysteresis within the full range of the display as well as selectable delay of the switch-on in the range of 0...99,9 s. Reaching the preset limits is signalled by LED and simultaneously by the switch-on of the relevant relay.

Data outputs are for their rate and accuracy suitable for transmission of the measured data for further projection or directly into the control systems. We offer an isolated RS232 and RS485 with the ASCII or DIN MessBus protocol.

Analog outputs will find their place in applications where further evaluating or processing of measured data is required in external devices. We offer universal analog output with the option of selection of the type of output - voltage/current. The value of analog output corresponds with the displayed data and its type and range are selectable in Menu.

Measured data record is an internal time control of data collection. It is suitable where it is necessary to register measured values. Two modes may be used. FAST is designed for fast storage (40 records/s) of all measured values up to 8 000 records. Second mode is RTC, where data record is governed by Real Time with data storage in a selected time segment and cycle. Up to 250 000 values may be stored in the instrument memory. Data transmis sion into PC via serial interface RS232/485 and OM Link.

3. INSTRUMENT CONECTION

The instrument supply leads should not be in proximity of the incoming low-potential signals.
Contactors, motors with larger input power should not be in proximity of the instrument.
The leads into the instrument input (measured quantity) should be in sufficient distance from all power leads and appliances. Provided this cannot be secured it is necessary to use shielded leads with connection to ground (bracket E).
The instruments are tested in compliance with standards for use in industrial area, yet we recommend to abide by the above mentioned principles.

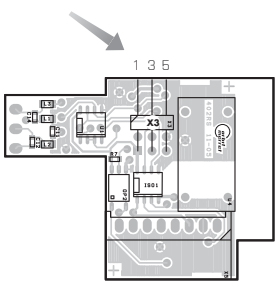
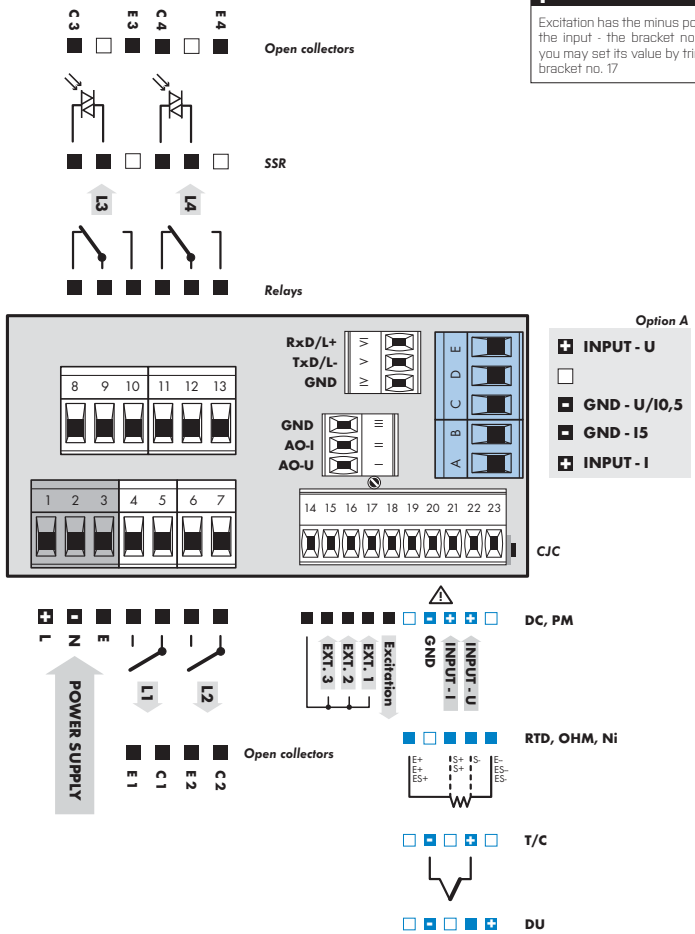
1-2	connect L+ to (+) source	terminalconnected	
3-4	termination of line 120 Ohm	disconnected	connect at the end of line
5-6	connect L- to (-) source	terminalconnected	do not disconnect

RS 485 line should have a linear structure - wires (ideally shielded and twisted) should lead from one device to another.



!

Excitation has the minus pole common with the input - the bracket no. 20 - GND and you may set its value by trimmer above the bracket no. 17



Maximum of 250 mA may be connected to "INPUT - I" (bracket no. 21) , i.e. 10-times range overload.
Mind the correct connection/mistaking of current - voltage input.
Destruction of measuring resistance in current input (15R) may occur.

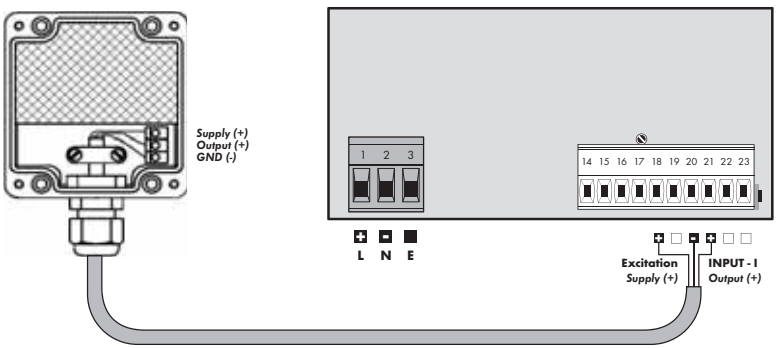
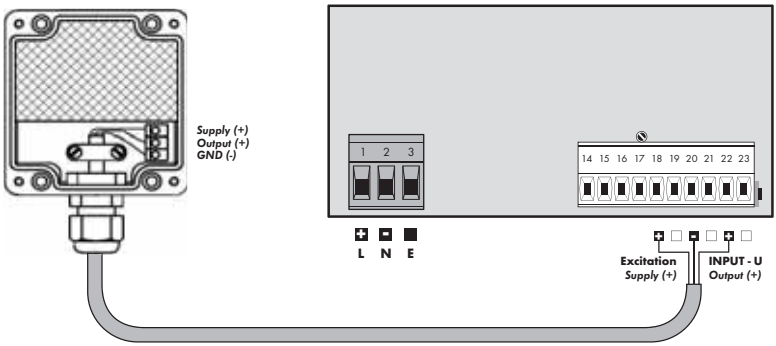
Example connection of a 3-wire sensor with current signal output powered by instrument's excitation



Example connection of 3-wire sensor with voltage signal output powered by instrument's excitation



Example connection of resistance measurement using 4 wires

By connecting resistor R* we elimintate error message E. I.OV. (input overflow) when the measured resistance is disconnected

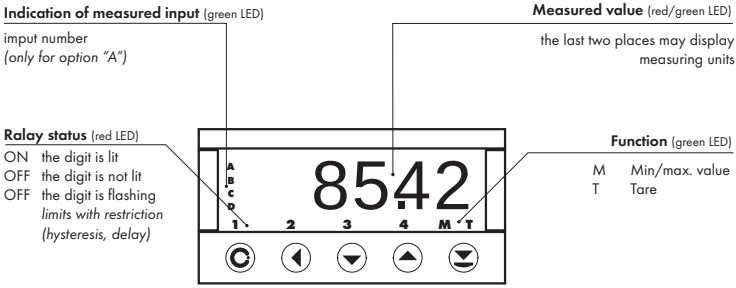
4. INSTRUMENT SETTING

Setting and controlling the instrument is performed by means of 5 control keys located on the front panel. With the aid of these keys it is possble to browse through the operation menu and to select and set required values.



Symbols used in the instructions

DC PM DU OHM RTD T/C Indicates the setting for given type of instrument

DEF values preset from manufacture

42 symbol indicates a flashing light (symbol)

MIN inverted triangle indicates the item that can be placed in USER menu

CONECT broken line indicates a dynamic item, i.e. it is displayed only in particular selection/version

after pressing the key the set value will not be stored

after pressing the key the set value will be stored

Setting the decimal point and the minus sign

DECIMAL POINT

Its selection in the menu, upon modification of the number to be adjusted it is performed by the control key ◀ with transition beyond the highest decade, when the decimal point starts flashing . Positioning is performed by ▲/▼.

THE MINUS SIGN

Setting the minus sign is performed by the key ▼ on higher decade. When editing the item substraction must be made from the current number (e.g.: 013 > ▼, on class 100 > -87)

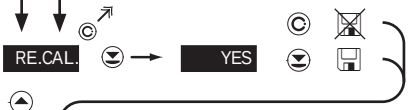
LIGHT ▼ RE.CAL.

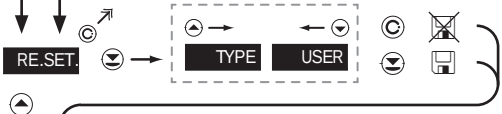


RE.CAL. **Restoration of manufacture calibration**

- in the event of error calibration it is feasible to restore manufacture calibration. Prior to execution of any modifications you will be asked to confirm your selection. (YES)

Restoration of manufacture setting > RE. CAL. — Example

RE.CAL. ▲ YES ▼ RE.SET.



RE.SET. **Restoration of manufacture instrument setting**

- in the event of error setting the manufacture setting may be restored
- restoration is performed for the currently selected type of the instrument input (select "TYPE")
- provided you stored your user setting in the "**PROFI**" menu, it may also be restored (select "**USER**")
- loading manufacture calibration and primary setting of items on the menu (DEF)

Restoration of manufacture setting > RE. SET. — Example

RE.SET. ▲ TYPE ▼ LANG.

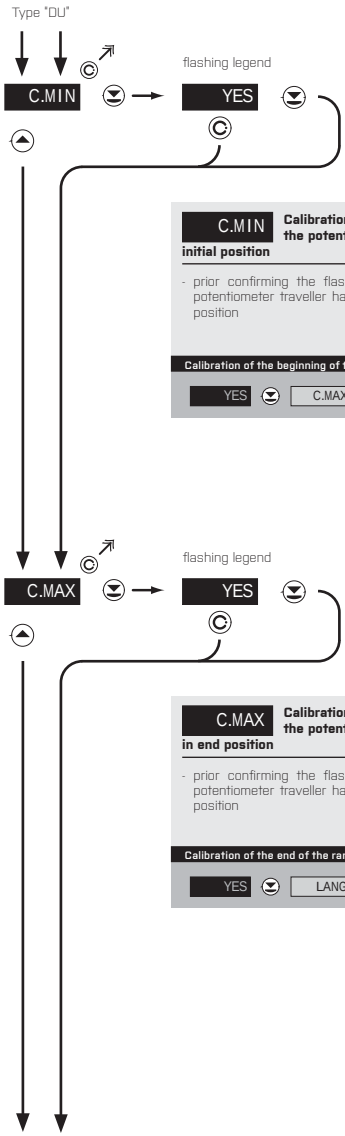
Type "PM"	40
Type "OHM"	40
Type "RTD-Pt"	40
Type "RTD-Ni"	40
Type "T/C"	40
Type "DU"	39
Type "RTD-Cu"	40



C.MIN **Calibration of input range - the potentiometer traveller in initial position**

Only for type "DU"

- prior confirming the flashing "YES" sign the potentiometer traveller has to be in given idle position

Calibration of the beginning of the range > C. MIN Example

YES C.MAX

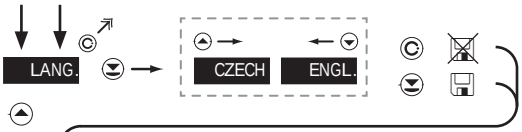
C.MAX **Calibration of input range - the potentiometer traveller in end position**

Only for type "DU"

- prior confirming the flashing "YES" sign the potentiometer traveller has to be in given idle position

Calibration of the end of the range > C. MAX Example

YES LANG.

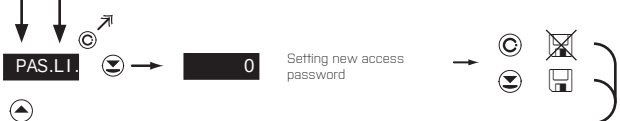


LANG. **Selection of language in instrument menu**

- selection of language version of the instrument menu

DEF = ENGL.

Language selection - ENGLISH > LANG. = ENGL. Example

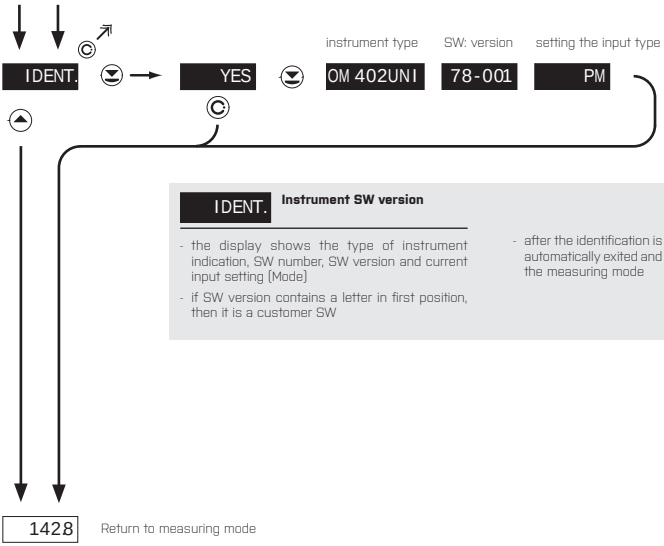


PAS.LI. **Setting new access password**

- access password for menu **LIGHT**
- range of the number code 0...9999
- upon setting the password to "**0000**" the access to menu **LIGHT** is free without prompt to enter it
- in case the password is lost, please contact the adminstrator of this device

DEF = 0

New password - 341 > PAS. LI. = 341 Example



IDENT. **Instrument SW version**

- the display shows the type of instrument indication, SW number, SW version and current input setting (Mode)
- if SW version contains a letter in first position, then it is a customer SW
- after the identification is completed the menu is automatically exited and the instrument restores the measuring mode

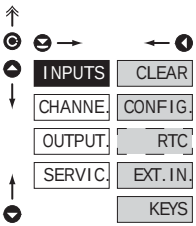
!

Upon delay exceeding 60 s the programming mode is automatically discontinued and the instrument itself restores the measuring mode

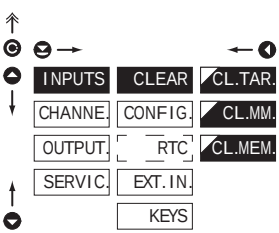
6.1 SETTING "PROFI" - INPUT



The primary instrument parameters are set in this menu

CLEAR	Resetting internal values
CONFIG.	Selection of measuring range and parameters
RTC	Setting date and time for option with RTC
EXT. IN.	Setting external inputs functions
KEYS	Assigning further functions to keys on the instrument

6.1.1 RESETTING INTERNAL VALUES



CLEAR **Resetting internal values**

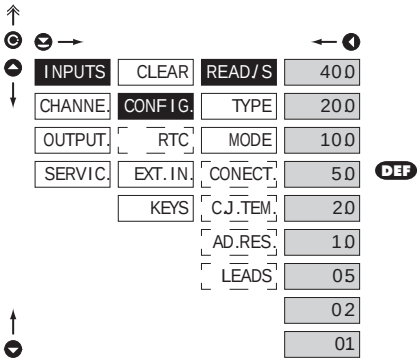
CL.TAR.	Tare resetting
CL.MM.	Resetting min/max value

- resetting memory for the storage of minimum and maximum value achieved during measurement

CL.MEM.	Resetting the instrument memory

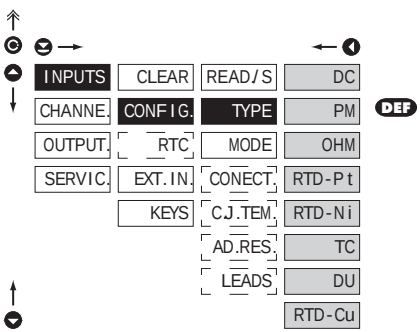
- resetting memory with data measured in the "FAST" or "RTC" modes
- not in standard equipment

6.1.2a SELECTION OF MEASURING RATE



READ/S	Selection of measuring rate
400	40,0 measurements/s
200	20,0 measurements/s
100	10,0 measurements/s
50	5,0 measurements/s
20	2,0 measurements/s
10	1,0 measurement/s
05	0,5 measurements/s
02	0,2 measurements/s
01	0,1 measurements/s

6.1.2b SELECTION OF „INSTRUMENT" TYPE



TYPE	Selection of „instrument" type
	- selection of particular type of "instrument" is bound to relevant dynamic items
DC	DC voltmeter
PM	Process monitor
OHM	Ohmmeter
RTD-Pt	Thermometer for Pt xxx
RTD-Ni	Thermometer for Ni xxxx
TC	Thermometer pro thermocouples
DU	Display for linear potentiometers
RTD-Cu	Thermometer for Cu xxx

6.1.2c SELECTION OF MEASURING RANGE

INT.1TC Measurement without reference thermocouple

- measuring cold junction at instrument brackets

INT2TC Measurement with reference thermocouple

- measuring cold junction at instrument brackets with anti-series connected reference thermocouple

EXT1TC Measurement without reference thermocouple

- the entire measuring set is working under invaried and constant temperature

EXT2TC Measurement with reference thermocouple

- when using compensation box

!

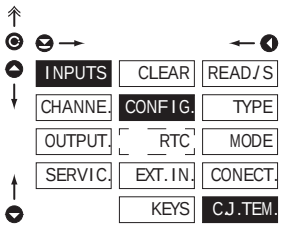
Method and procedure of setting the cold junctions is described in separate chapter on page 80

!

For thermocoule type "B" the items **CONECT.** and **C.J. TEM.** are not available

6.1.2e SETTING TEMPERATURE OF COLD JUNCTION

T/C

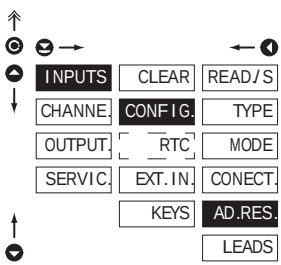


CJ.TEM. **Setting temperature of cold junction**

- range 0...99°C with compensation box
- DEF = 23°C

6.1.2f COMPENSATION OF 2-WIRE CONDUCT

RTD OHM

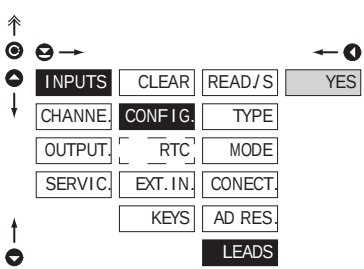


AD.RES. **Offset of the beginning of the measuring range**

- in cases when it is necessary to offset the beginning of the range by certain value, e.g. while using sensor in measuring head
- entered directly in Ohm (0...9999)
- DEF = 0

6.1.2g COMPENSATION OF 2-WIRE CONDUCT

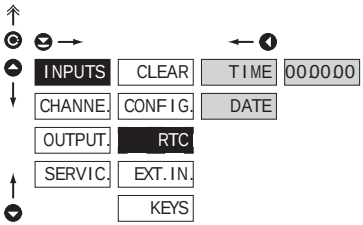
RTD OHM



LEADS **Compensation of 2-wire conduct**

- for measurement accuracy it is necessary to perform compensation of conduct always in case of 2-wire connection
- prior confirmation of the displayed prompt "**YES**" it is necessary to substitute the sensor at the end of the conduct by a short-circuit
- DEF = 0

6.1.3 SETTING THE REAL TIME CLOCK

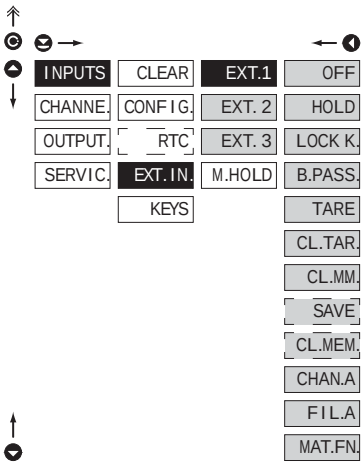


RTC — **Setting the real time clock (RTC)**

TIME — Time setting
- format 23.59.59

DATE — Date setting
- format DD.MM.YY

6.1.4a EXTERNAL INPUT FUNCTION SELECTION



EXT.IN. — **External input function selection**

OFF — Input is off

HOLD — Activation of HOLD

LOCK K. — Locking keys on the instrument

B.PASS. — Activation of locking access into programming menu
LIGHT/PROFI

TARE — Tare activation

CL.TAR. — Tare resetting

CL.MM. — Resetting min/max value

SAVE — Activation of measured data record in instrument memory

CL.MEM. — Clearing memory for option FAST/RTC

CHAN.A — Displaying value of "Channel A"

FIL.A — Displaying value of "Channel A" after being processed by digital filters

MAT.FN. — Displaying value of "Mathematical function"

- DEF EXT. 1 > HOLD
- DEF EXT. 2 > LOCK K.
- DEF EXT. 3 > TARE

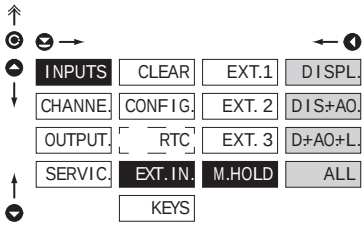
Procedure identical for **EXT. 2** and **EXT. 3**.

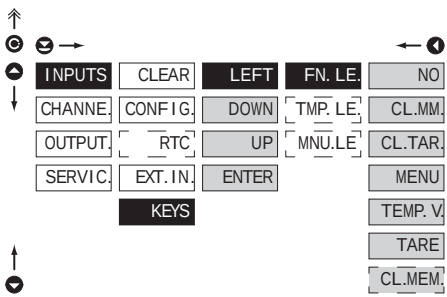
6.1.4b SELECTION OF FUNCTION "HOLD"



M.HOLD — **Selection of function "HOLD"**

- **DISPL.** — "HOLD" locks only the value displayed
- **DIS+AO.** — "HOLD" locks the value displayed and on AO
- **D+AO+L.** — "HOLD" locks the value displayed, on AO and limit evaluation
- **ALL** — "HOLD" locks the entire instrument

6.1.5a OPTIONAL ACCESSORY FUNCTIONS OF THE KEYS



FN. LE. — **Assigning further functions to instrument keys**

- „FN. LE." > executive functions

- **NO** — Key has no further function
- **CL.MM.** — Resetting min/max value
- **CL.TAR.** — Tare resetting
- **MENU** — Direct access into menu on selected item
  - after confirmation of this selection the "MNU. LE." item is displayed on superior menu level, where required selection is performed
- **TEMP. V.** — Temporary projection of selected values
  - after confirmation of this selection the item "TMP. LE." is displayed on superior menu level, whererequired selection is performed
- **TARE** — Tare function activation
- **CL.MEM.** — Clearing memory
  - clearing memory with data measured in modes "FAST" or "RTC"

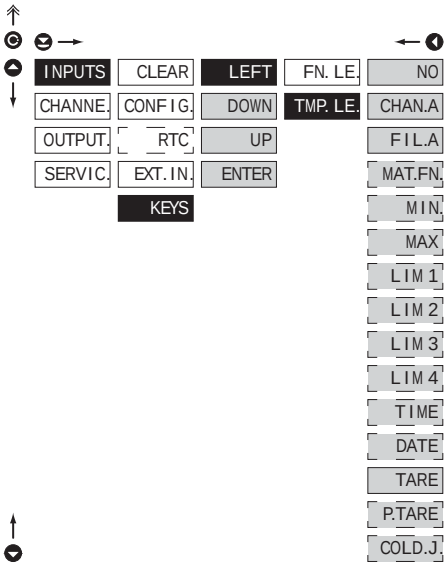
6.1.5b OPTIONAL ACCESSORY FUNCTIONS OF THE KEYS - TEMPORARY PROJECTION



TMP. LE. **Temporary projection of selected item**

- „TMP. LE." > temporary projection of selected values
- "Temporary" projection of selected value is displayed for the time of keystroke
- "Temporary" projection may be switched to permanent by pressing ⊙ + "Selected key", this holds until the stroke of any key

NO	Temporary projection is off
CHAN.A	Temporary projection of "Channel A" value
FIL.A	Temporary projection of "Channel A" value after processing digital filters
MAT.FN.	Temporary projection of "Mathematic functions" value
MIN	Temporary projection of "Min. value"
MAX	Temporary projection of "Max. value"
LIM 1	Temporary projection of "Limit 1" value
LIM 2	Temporary projection of "Limit 2" value
LIM.3	Temporary projection of "Limit 3" value

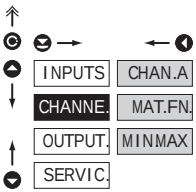
6.2 SETTING "PROFI" - CHANNELS

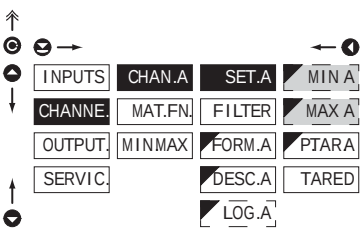


The primary instrument parameters are set in this menu

CHAN.A	Setting parameters of measuring "Channel"
MAT.FN.	Setting parameters of mathematic functions
MINMAX	Selection of access and evaluation of Min/max value

6.2.1a DISPLAY PROJECTION

DC PM DU OHM



SET.A **Setting display projection**

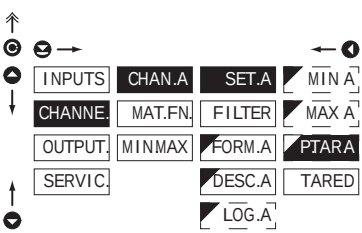
MIN A Setting display projection for minimum value of input signal

- range of the setting: -99999...999999
- DEF = 0

MAX A Setting display projection for maximum value of input signal

- range of the setting: -99999...999999
- DEF = 100

6.2.1b SETTING FIXED TARE



P.TAR.A **Setting "Fixed tare" value**

- setting is designed for the event when it is necessary to firmly shift the beginning of the range by known size
- when setting [**P. TAR. A**≠ 0] is in effect, display does not show the "**T**" symbol
- range of the setting: -99999...999999

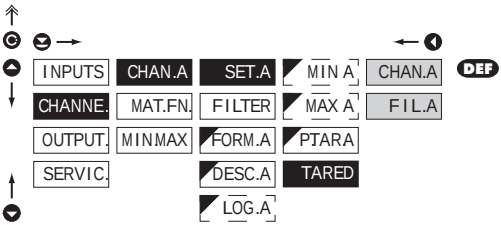
6.2.1c SELECTING WHERE TARE WILL BE APPLIED

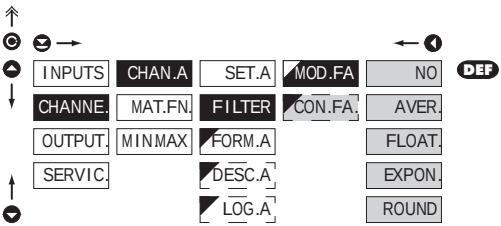


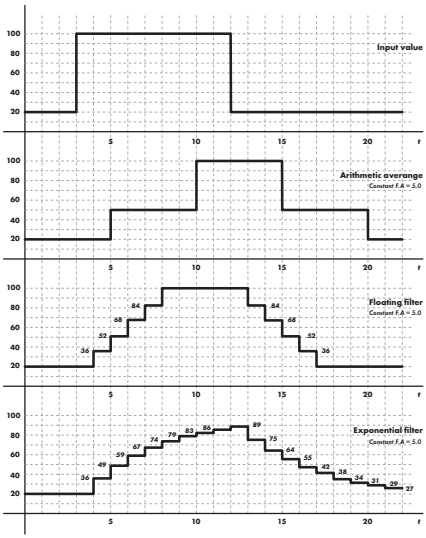
TARED **Selecting the position of tare**

CHAN.A The value will be tared before linearisation and digital filter

FIL.A The value will be tared after linearisation and digital filter

6.2.1d DIGITAL FILTERS





MOD.FA **Selection of digital filters**

- at times it is useful for better user projection of data on display to modify it mathematically and properly , wherefore the following filters may be used

NO Filters are off

AVER. Measured data average

- arithmetic average from given number („CON.F. A.") of measured values
- range 2...100

FLOAT. Selection of floating filter

- floating arithmetic average from given number („CON.F. A.") of measured data and updates with each measured value
- range 2...30

EXPON. Selection of exponential filter

- integration filter of first prvniho grade with time constant („CON.F. A.") measurement
- range 2...100

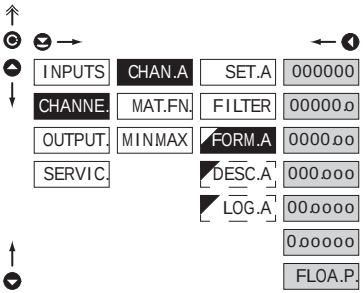
ROUND Measured value rounding

- is entered by any number, which determines the projection step (e.g: „CON.F. A." = 2,5 > display 0, 2.5, 5,...)

CON.F.A. Setting constants

- this menu item is always displayed after selection of particular type of filter
- **DEF** = 2

6.2.1e PROJECTION FORMAT - POSITIONING OF DECIMAL POINT



FORM.A **Selection of decimal point**

- the instrument allows for classic projection of a number with positioning of the DP as well as projection with floating DP, allowing to display a number in its most exact form „FLOAT. P."

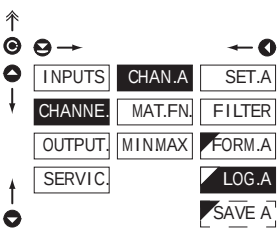
FLOA.P. Floating DP

6.2.1f PROJECTION OF DESCRIPTION - THE MEASURING UNITS



DESC.A **Setting projection of descript. for "Channel A"**

- projection of mesured data may be extended (at the expense of the number of displayed places) by two characters for description
- description is set by shifted ASCII code, when two first places show the set description and two last characters their code in period 0...95
- description is cancelled by code 00

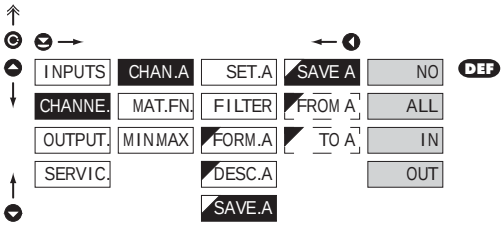
6.2.1g SELECTION OF STORING DATA INTO INSTRUMENT MEMORY



SAVE.A **Selection of storing data into instrument memory**

- by selection in this item you allow to register values into instrument memory
- another setting in item "**OUTPUT. > MEMORY**" (not in standard experiment)

NO Measured data is not stored

ALL Measured data is stored in memory

IN Only data measured within the set interval is stored in memory

OUT Only data measured outside the set interval is stored in memory

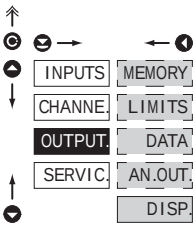
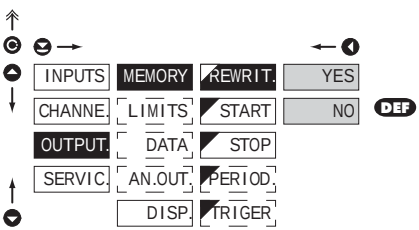
6.3 SETTING „PROFI" - OUTPUTS



In this menu it is possible to set parame ters of the instrument output signals

- **MEMORY** – Setting data logging into memory
- **LIMITS** – Setting type and parameters of limits
- **DATA** – Setting type and parameters of data output
- **AN.OUT.** – Setting type and parameters of analog output
- **DISP.** – Setting display projection and brightness

6.3.1a SELECTION OF MODE OF DATA LOGGING INTO INSTRUMENT MEMORY

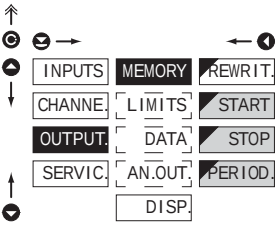


REWRIT. **Selection of the mode of data logging**

- selection of the mode in the event of full instrument memory

- **NO** – Rewriting values prohibited
- **YES** – Rewriting values permitted, the oldest get rewritten by the latest

6.3.1b SETTING DATA LOGGING INTO INSTRUMENT MEMORY - RTC



START Start of data logging into instrument memory

- time format HH.MM.SS

STOP Stop data logging into instrument memory

- time format HH.MM.SS

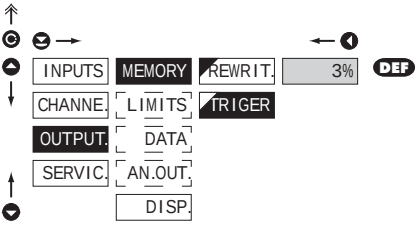
PERIOD. Period of data logging into instrument memory

- determines the period in which values will be logged in an interval delimited by the time set under items **START** and **STOP**
- time format HH.MM.SS
- records are made on a daily basis in selected interval and period
- item not displayed if "**SAVE**" is selected in menu (**INPUT > EXT. IN.**)

RTC

The lowest recording rate possible is once a day, the highest is every second. Under exceptional circumstances it is possible to set the rate to 8 times per second by entering the recording period as 00:00:00. However, this mode is not recommended due to the memory overload. Recordings are realised in a timeframe of one day and are repeated periodically every following day. Recordings can take place either inside or outside of selected time intervals. The duration of re-writing can be determined by the number of channels recorded as well as by the recording rate.

6.3.1c SETTING DATA LOGGING INTO INSTRUMENT MEMORY - FAST



TRIGER **Setting logging data into inst. memory**

- logging data into inst. memory is governed by the folowing selection, which determines how many percent of the memory is reserved for data logging prior to initiation of trigger imputse
- initialization is on ext. input or button
- setting in range 1...100 %
- when setting 100 %, datalogging works in the mode **ROLL** > data keep getting rewritten in cycles

1. Memory initialization

- clear memory (ext.input, button)
- LED "M" flashes, after reading TRIGGER (%) memory is permanently shining. In ROLL flashes constantly.

2. Triggering

- external input, button
- after the memory LED is full "M" turns off
- in the ROLL mode the trigger ends datalogging and LED turns off

3 . Termination

- ext. input, button or reading data via RS

FAST

The memory operates on the basis of memory oscilloscope. Select an area of 0...100% of the memory capacity (100% represents 8 192 individual recordings for a single channel measurement). This area is filled cyclically up to the point when the recording starts (activated by the front panel button or by an external input). When the remaining memory capacity fills up the recording stops. A new recording is possible after the deletion of the latest recording. It is possible to abort a recording before its completion by reading out the data.

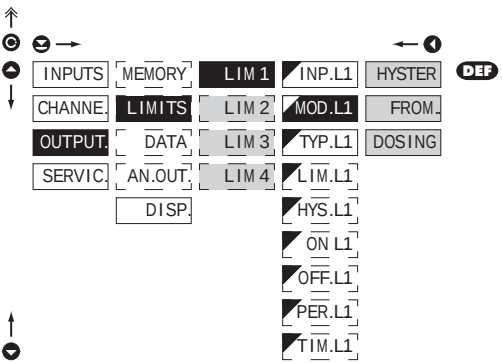
6.3.2b SELECTION OF TYPE OF LIMIT



MOD.L1 **Selection the type of limit**

HYSTER	Limit is in mode "Limit, hysteresis, delay"

- for this mode the parameters of "**LIM. L.1**" are set, at which the limit will shall react, "**HYS. L.1**" the hysteresis range around the limit (LIM ±1/2 HYS) and time "**TIM. L.1**" determining the delay of relay switch-on

FROM.	Frame limit

- for this mode the parameters are set for interval "**ON. L.1**" the relay switch-on and "**OFF. L.1**" the relay switch-off

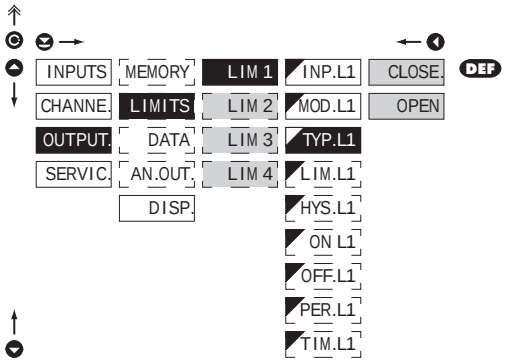
DOSING	Dose limit (periodic)

- for this mode the parameters are set for "**PER. L.1**" determining the limit value as well as its multiples at which the output is active and "**TIM. L.2**" indicating the time during which is the output active

!

Setting is identical for **LIM 1**, **LIM 2**, **LIM 3** and **LIM 4**

6.3.2c SELECTION OF TYPE OF OUTPUT



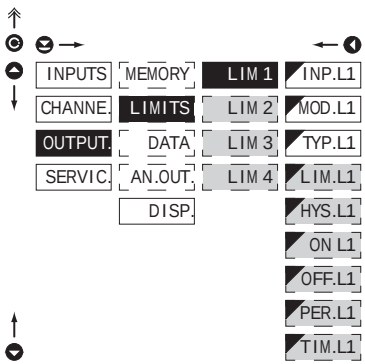
TYP.L1 **Selection of type of output**

- **CLOSE.** Output switches on when condition is met
- **OPEN** Output switches off when condition is met

!

Setting is identical for **LIM 1**, **LIM 2**, **LIM 3** and **LIM 4**

6.3.2d SETTING VALUES FOR LIMITS EVALUATION



- **LIM.L1** Setting limit for switch-on
  - for type "**HYSTER**"
- **HYS.L1** Setting hysteresis
  - for type "**HYSTER**"
  - indicates the range around the limit (in both directions, LIM. ±1/2 HYS.)
- **ON.L1** Setting the outset of the interval of limit switch-on
  - for type "**FROM..**"
- **OFF.L1** Setting the end of the interval of limit switch-on

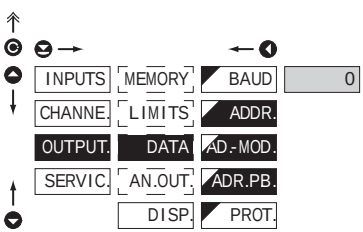
6.3.3b SETTING INSTRUMENT ADDRESS



ADDR. — **Setting instrument address**

- setting in range 0...31
- DEF = 00

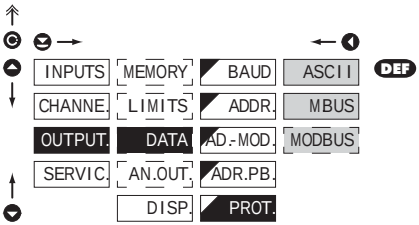
ADDR. — **Setting instrument address - MODBUS**

- setting in range 1...247
- DEF = 1

ADR.PB. — **Setting instrument address - PROFIBUS**

- setting in range 1...127
- DEF = 19

6.3.3c SELECTION OF DATA OUTPUT PROTOCOL

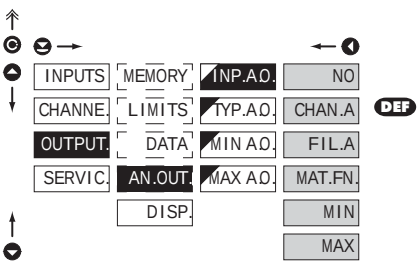


PROT. Selection of the type of analog output

- ASCII — Data protocol ASCII
- M.BUS — Data protocol DIN MessBus
- MODBUS — Data protocol MODBUS-RTU

- option is available only for RS 485

6.3.4a SELECTION OF INPUT FOR ANALOG OUTPUT

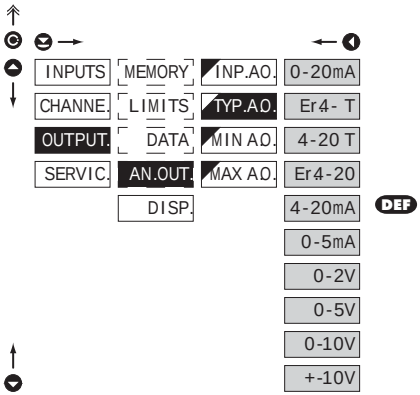


INP.AO. Selection evaluation analog output

- selection of value from which the analog output will be evaluated

- NO — AO evaluation is off
- CHAN.A — AO evaluation from "Channel A"
- FIL.A — AO evaluation from "Channel A" after digital filters processing
- MAT.FN. — AO evaluation from "Math. functions"
- MIN — AO evaluation from "Min. value"
- MAX — AO evaluation from "Max. value"

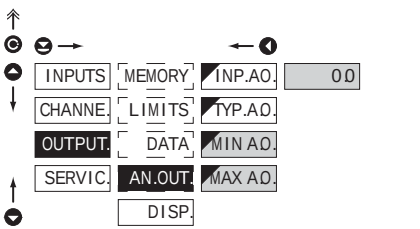
6.3.4b SELECTION OF THE TYPE OF ANALOG OUTPUT



TYP. AO. **Selection of the type of analog output**

- **0-20mA** Type - 0...20 mA
- **Er4- T** Type: 4...20 mA with indication
  - with broken loop detection and indication of error statement (< 3,6 mA)
- **4-20 T** Type: 4...20 mA with indication
  - with broken loop detection (< 3,6 mA)
- **Er4-20** Type: 4...20 mA with indication
  - with indic. of error statement (< 3,6 mA)
- **4-20mA** Type - 4...20 mA
- **0-5mA** Type - 0...5 mA
- **0-2V** Type - 0...2 V
- **0-5V** Type - 0...5 V
- **0-10V** Type - 0...10 V
- **+-10V** Type - ±10 V

6.3.4c SETTING THE ANALOG OUTPUT RANGE



AN.OUT. **Setting the analog output range**

- analog output is isolated and its value corresponds with displayed data. It is fully programmable, i.e. it allows to assign the AO limit points to two arbitrary points of the entire measuring range

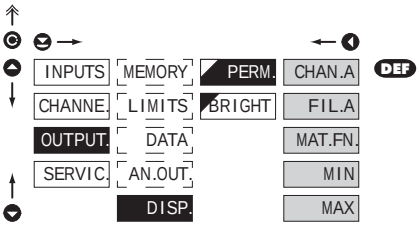
MIN AO. Assigning the display value to the beginning of the AO range

- range of the setting: -99999...999999
- DEF = 0

MAX AO. Assigning the display value to the end of the AO range

- range of the setting: -99999...999999
- DEF = 100

6.3.5a SELECTION OF INPUT FOR DISPLAY PROJECTION

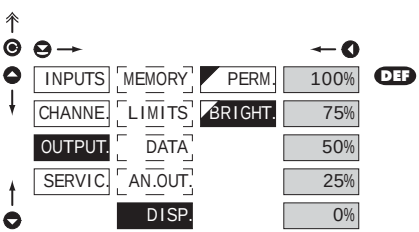


PERM. Selection display projection

- selection of value which will be shown on the instrument display

CHAN.A	Projection of values from "Channel A"
FIL.A	Projection of values from "Channel A" after digital filters processing
MAT.FN.	Projection of values from "Math.functions"
MIN.	Projection of values from "Min.value"
MAX	Projection of values from "Max. value"

6.3.5b SELECTION OF DISPLAY BRIGHTNESS



BRIGHT Selection of display brightness

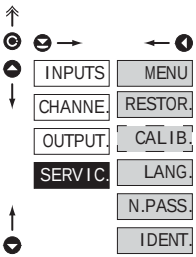
- by selecting display brightness we may appropriately react to light conditions in place of instrument location

0%	Display is off

- after keystroke display turns on for 10 s

25%	Display brightness - 25%
50%	Display brightness - 50%
75%	Display brightness - 75%
100%	Display brightness - 100%

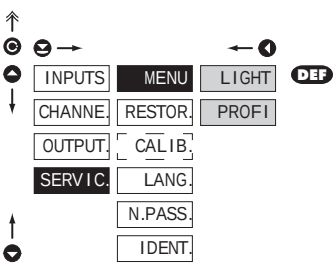
6.4 SETTING "PROFI" - SERVIS



The instrument service functions are set in this menu

MENU	Selection of menu type LIGHT/PROFI
RESTOR.	Restore instrument manufacture setting and calibration
CALIB	Input range calibration for „DU" version
LANG.	Language version of instrument menu
N.PASS.	Setting new access password
IDENT.	Instrument identification

6.4.1 SELECTION OF TYPE OF PROGRAMMING MENU



MENU **Selection of menu type - LIGHT/PROFI**

- enables setting the menu complexity according to user needs and skills

LIGHT Active LIGHT menu

- simple programming menu, contains only items necessary for configuration and instrument setting
- linear menu > items one after another

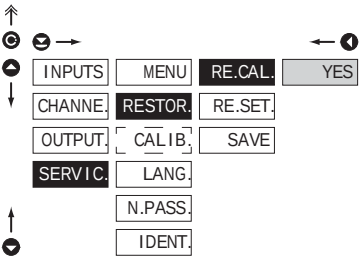
PROFI Active PROFI menu

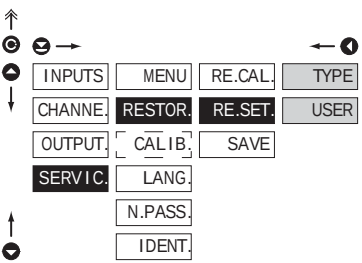
- complete programming menu for expert users
- tree menu

!

Change of setting is valid upon next access into menu

6.4.2 RESTORATION OF MANUFACTURE SETTING





RESTOR. Restoration of manufacture setting

- in the event of error setting or calibration, manufacture setting may be restored.

RE.CAL. Restoration of manufacture calibration of the instrument

- prior executing the changes you will be asked to confirm you selection „YES"

RE.SET. Restoration of instrument manufacture setting

TYPE Restoration of instrument manufacture setting

- generating the manufacture setting for currently selected type of instrument (items marked **DEF**)

USER Restoration of instrument user setting

- generating the instrument user setting, i.e. setting stored under **SERVIC./RESTOR./SAVE**

SAVE Save instrument user setting

- storing the user setting allows the operator to restore it in future if needed

!

After restoration the instrument switches off for couple seconds

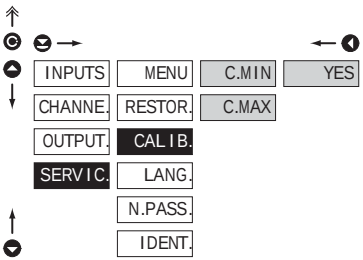
6.4.3 CALIBRATION - INPUT RANGE

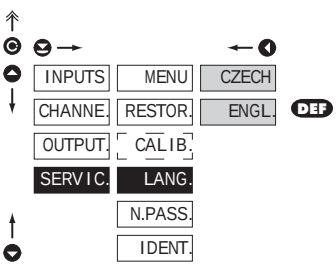
DU



CALIB. **Input range calibration**

- when "C. MIN" is displayed, move the potentiometer traveller to the required minimum position and confirm by „Enter", calibration is confirmed by "YES"
- when "C. MAX" is displayed, move the potentiometer traveller to required maximum position and confirm by „Enter", calibration is confirmed by "YES"

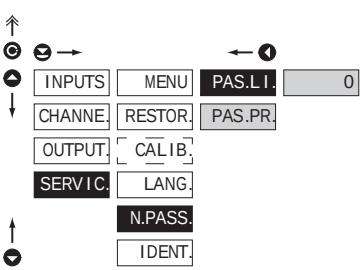
6.4.4 SELECTION OF INSTRUMENT MENU LANGUAGE VERSION



LANG. **Selection of instrument menu language version**

CZECH	Instrument menu is in Czech
ENGL.	Instrument menu is in English

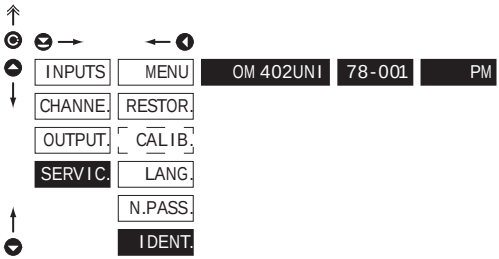
6.4.5 SETTING NEW ACCESS PASSWORD



N.PASS. **Setting new password for access to LIGHT and PROFI menu**

- this option allows to change the numeric code, which blocks the access into **LIGHT** and **PROFI** menu.
- numerci code range: 0...9999
- universal passwords in the event of loss: LIGHT Menu > „**8177**" PROFI Menu > „**7915**"

6.4.6 INSTRUMENT IDENTIFICATION



IDENT. **Projection of instrument SW version**

- display shows type identification of the instrument, SW number, SW version and current input setting (Mode)
- if the SW version reads a letter on first position, it is a customer SW

IDENT.

Pos.	Description
1.	type of instrument
2.	SW: number - version
3.	the input type

SETTING
USER

For user operation
Menu items are set by the user (Profi/Light) as per request
Access is not password protected
Optional menu structure either tree (PROFI) or linear (LIGHT)

7.0 SETTING ITEMS INTO "USER" MENU

- **USER** menu is designed for users who need to change only several items of the setting without the option to change the primary instrument setting (e.g. repeated change of limit setting)
- there are no items from manufacture permitted in **USER** menu
- on items indicated by inverse triangle LIM 1
- setting may be performed in **LIGHT** or **PROFI** menu, with the **USER** menu then overtaking the given menu structure

Setting

NO item will not be displayed in USER menu

YES item will be displayed in USER menu with editing option

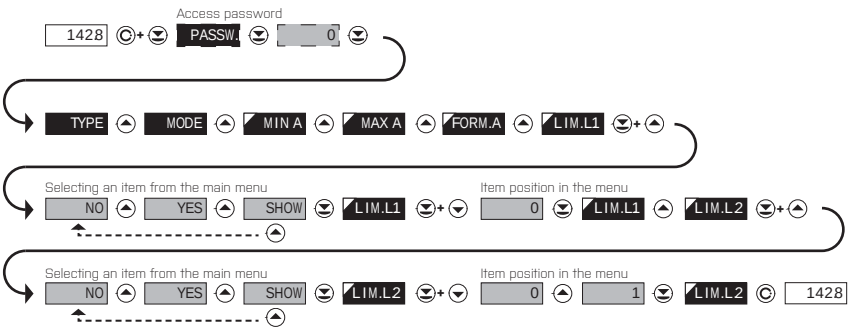
SHOW item will be solely displayed in USER menu

Setting sequence of items in "USER" menu

In compiling USER menu from active LIGHT menu the items (max. 10) may be assigned a sequence, in which they will be projected in the menu

Example of ranking the order of menu items in the "USER" menu

In this example we want to have a direct access to menu items Limit 1 and Limit 2 (example show is for the Light menu, but can equaly be used in the Profi menu).

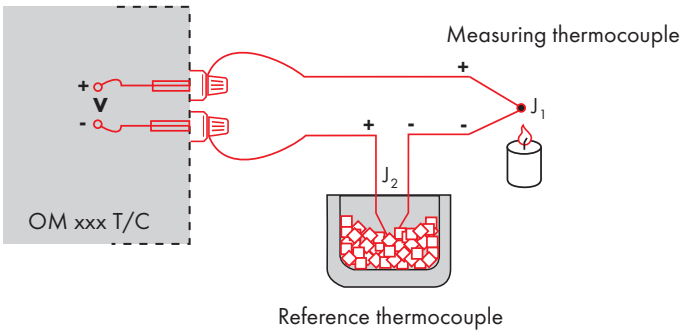


The result of this setting is that when the © button is pressed, the display will read „**LIM L.1**". By pressing ⏬ button you confirm your selection and then you can set the desired limit value, or by pressing the ⏫ button you can go to setting of „**LIM. L.2**" where you can proceed identically as with Limit one.

You can exit the setting by pressing the ⏬ button by which you store the latest setting and pressing the © button will take you back to the measuring mode

8. METHOD OF MEASURING THE CJC

Instrument with input for temperature measurement with thermocouple allows to set two types of measurement of cold junction.



WITH REFERENCE THERMOCOUPLE

- a reference thermocouple may be located in the same place as the measuring instrument or in place with stable temperature/compensation box
- when measuring with reference thermocouple set CONECT.in the instrument menu to INT2TC or EXT2TC
- when using a thermostat (a compensation box or environment with constant temperature) set in the instrument menu CJCTEM. its temperature (applies for setting CONECT. to EXT2TC)
- if the reference thermocouple is located in the same environment as the measuring instrument then set in the instrument menu CONECT. to INT2TC.Based on this selection the measurement of the ambient temperatureis performed by a sensor located in the instrument terminal board

WITHOUT REFERENCE THERMOCOUPLE

- inaccuracy originating from the creation of dissimilar thermocouples on the transition point terminal/conductor of the thermocouple is not compensated for in the instrument
- when measuring without reference thermocouple set CONECT. in the instrument menu to INT1TC or EXT1TC
- when measuring temperature without reference thermocouple the error in measured data may be as much as 10°C (applies for setting CONECT. to EXT1TC)

The instruments communicate via serial line RS232 or RS485. For communication they use the ASCII protocol. Communication runs in the following format - ASCII (8 bit, no parity, one stop bit), DIN MessBus (7 bit, even parity, one stop bit).

The transfer rate is adjustable in the instrument menu. The instrument address is set in the instrument menu in the range of 0 ÷ 31. The manufacture setting always presets the ASCII protocol, rate of 9600 Baud, address 00. The type of line used - RS232 / RS485 - is determined by an output board automatically identified by the instrument.The commands are described in specifications you can find at www.orbit.merret.cz

t	0	0	1	1
u	1	0	1	1
v	0	1	1	1
w	1	1	1	1

Relay status is generated by command #AA6X <CR>.

The instrument immediately returns the value in the format >HH <CR>, where HH is value in HEX format and range 00_H...FF_H. The lowest bit stands for „Relay 1", the highest for „Relay 8"

ERROR	CAUSE	ELIMINATION
E.D.Un.	Number is too small (large negative) to be displayed	change DP setting, channel constant setting
E.D.OW.	Number is too large to be displayed	change DP setting, channel constant setting
E.T.UN.	Number is outside the table range	increase table values, change input setting (channel constant setting)
E.T.OW.	Number is outside the table range	increase table values, change input setting (channel constant setting)
E. I .UN.	Input quantity is smaller than permitted input quantity range	change input signal value or input (range) setting
E. I .OW.	Input quantity is larger than permitted input quantity range	change input signal value or input (range) setting
E.HW.	A part of the instrument does not work properly	send the instrument for repair
E.EE	Data in EEPROM corrupted	perform restoration of manufacture setting, upon repeated error statement send instrument for repair
E.SET.	Data in EEPROM outside the range	perform restoration of manufacture setting, upon repeated error statement send instrument for repair
E.CLR	Memory was empty (presetting carried out)	upon repeated error statement send instrument for repair, possible failure in calibration
E.OUT.	Analogue output current loop disconnected	check wire connection

The instrument allows to add two descriptive characters to the classic numeric formats (at the expense of the number of displayed places). The setting is performed by means of a shifted ASCII code. Upon modification the first two places display the entered characters and the last two places the code of the relevant symbol from 0 to 95. Numeric value of given character equals the sum of the numbers on both axes of the table.

Description is cancelled by entering characters with code 00

GUARANTEE

A guarantee period of 60 months from the date of sale to the user applies to this instrument.
Defects occuring during this period due to manufacture error or due to material faults shall be eliminated free of charge.

For quality, function and construction of the instrument the guarantee shall apply provided that the instrument was connected and used in compliance with the instructions for use.

The guarantee shall not apply to defects caused by:

- mechanic damage
- transportation
- intervention of unqualified person incl. the user
- unavoidable event
- other unprofessional interventions

The manufacturer performs guarantee and post.guarantee repairs unless provided for otherwise.
