## 2x INPUT FOR IRC, UP / DW

INPUT COUNTER / FREQUENCY - IRC, UP / DW

UQC Contact, PNP, NPN

< 1 MHz

Sensor excitation

5 / 10 / 12 / 24 VDC, < 200 mA

CARD SETTINGS

The following parameters are edited in the setting

Select the **Position of the card** to be set. Use buttons ◀ ▶ to scroll among the fitted cards.

Type of the card fitted in the specified position.

Data transfer **priority** of the selected card. Bigger number of plugged-in cards slows down data flow on the bus. It can be optimized by setting priorities. The real value of the data flow can be then controlled in diagnostics. The maximum achievable data flow in slots A is 1100 frames/s, in slots B 550 frames / s.

Channel to be set. Use buttons ◀ ◀◀ ▶▶ ▶ to scroll among the channels. Number of possible selectable channels is determined by the card, which is being set
Button ⚙ is used to navigate to the settings of the selected channel.

Input type	UQC Contact ▸ 5 V ▸ 10 V ▸ 12 V ▸ 24 V ▸ 30 V
Inverted	☑ input inversion
	☐ without change
Edge	rising ▸ falling ▸ both
	edge selection (for counter reaction)
Filter time	100 µs ▸ 200 µs ▸ 500 µs ▸ 1 ms ▸ 2 ms ▸ 5 ms ▸ 10 ms ▸ 20 ms ▸ 50 ms ▸ 100 ms 200 ms ▸ 500 ms ▸ 1 s ▸ 2 s ▸ 5 s ▸ 10 s 20 s ▸ 50 s ▸ 1 min ▸ 2 min ▸ 5 min ▸ 10 min Setting determines how long the input pulse must be to prevent its filtration.
Measur. time	frequency measurement counts number of pulses within this time
Count down	☑ counter counts downwards
	☐ counter counts upwards
Preset	signal Preset sets contents of the counter to this value
Counter scale	constant, which re-multiplies the value of the counter (for conversion to a physical value)
Frequency scale	constant, which re-multiplies the value of the frequency (for conversion to a physical value)
Ofset frequency	offset of the beginning of the measuring range

INSTALLATION OF A NEW CARD

When installing a new card, always make sure the recorder is disconnected from the power supply!

1. Remove the recorder's back cover and break off the plugs covering the position where you intend to insert the new card. It is recommended to place analogue cards into faster slots in column „A" (Speed of the bus: Slot „A" 1 ms, Slot „B" 2 ms).

2. Remove the card from its shipping container and from the ESD packaging and slide it carefully into the selected slot until you feel a gentle click

3. Replace the back cover and turn the device on

4. Setting of the card is described in the preceding paragraph
